

Manufactured Housing - MODULAR HOUSING

sophisticated design

By Richard Poliquin, P. Eng.
President, Tradeworks International Ventures Ltd.

Manufacturers of modular housing have made exceptional progress in the development of sophisticated housing solutions for the residential market. Images of simple, uninspiring, rectangular boxes are a thing of the past as today's manufacturers are well equipped to supply highly attractive homes that feature leading edge designs and building technologies. When you consider other cost savings, such as fast delivery and rapid construction, the benefits of modular construction become obvious.

The Devonshire, a 300 m2 luxury Britco home built in the resort community of Pender Harbour, British Columbia, is a perfect example of the building scope and design that can be achieved using modular construction. This beautiful classic two-story Craftsmen home seamlessly incorporates 7 building modules and a charming wrap-around veranda and cedar deck. The Devonshire's street appeal is enhanced by the use of true divided windows and traditional shakes on both the roof and dormer façade.

High quality interior features include a gourmet maple kitchen complete with granite countertops, mood setting recessed lighting, slate flooring and stainless steel appliances. Hardwood, slate and tile floors continue throughout the home which also features four fireplaces, built-in security, sound and vacuum systems, and a sumptuous en suite.

& manufacturing

The living room...is centered on a bright and comfortable bay whose generous windows frame a delightful view of the adjoining verandah and garden.

The main bathroom showcases a large jetted tub, separate shower enclosure, and attractive granite countertop and tub surround.

As demonstrated above modular housing, built in controlled factory environments, can incorporate high quality finishes and state-of-the-art technologies comparable to site-built homes. In addition to the residential market modular construction is equally well suited for use in commercial, institutional and industrial applications, as can be attested by Britco Structures Ltd. of Vancouver, British Columbia. A wide range of Britco structures can be found across North America as well as in export markets such as Africa, South America, Russia, Japan, China, Germany, the Caribbean, Egypt and the Middle East.
